this case, we drop the word discrete from discrete probability space Remark: A  $\sigma$ -algebra is a nonempty family  $\mathcal{F}$  of subsets of  $W$  satisfying the following properties: 1/  $\emptyset \in \mathcal{F}$  2/ For every subset  $A \subseteq W$ , if  $A \in \mathcal{F}$  then  $A^c \in \mathcal{F}$  3/ For every countable family  $(A_i)_{i \in \mathbb{N}}$  of subsets  $A_i \in \mathcal{F}$ , we have  $\bigcup_{i \in \mathbb{N}} A_i \in \mathcal{F}$

Elements of a set can be just about anything from real physical objects to abstract mathematical objects An important feature of a set is that its

elements are "distinct" or "uniquely identifiable" A set is typically expressed by curly braces, enclosing its elements If  $A$  is a set and  $a$  is an element of it, we write  $a \in A$

6 ADVANCED DISCRETE MATHEMATICS is not a statement because for some values of  $x$  and  $y$  the sentence is true whereas for other values of  $x$  and  $y$  it is false For example, if  $x = 1, y = 3$ , the sentence is true, but for  $x = -2, y = 0$ , it is false Similarly, the sentence Take two ...
